

HARRIS POLICY INNOVATION CHALLENGE

INNOVATION TOOLKIT
FOR PENSION REFORM

PROFESSOR WILL GOSSIN
FALL 2023

Midjourney

TODAY'S GOAL

Prepare you to think creatively and analytically

Establish a New Approach to the Challenge

Identify the Right Question to Ask

AGENDA

Asking The
Right Questions

What Is Innovation?

MisMatches are Secrets

2 Skills

Analogic Simulations

Risks to the Right Question

**“There are so many people,
working so hard, and
achieving so little.”**

Andy Grove, CEO of Intel

A black and white portrait of John Dewey, an elderly man with a mustache and glasses, wearing a suit and tie. The portrait is the background of the slide.

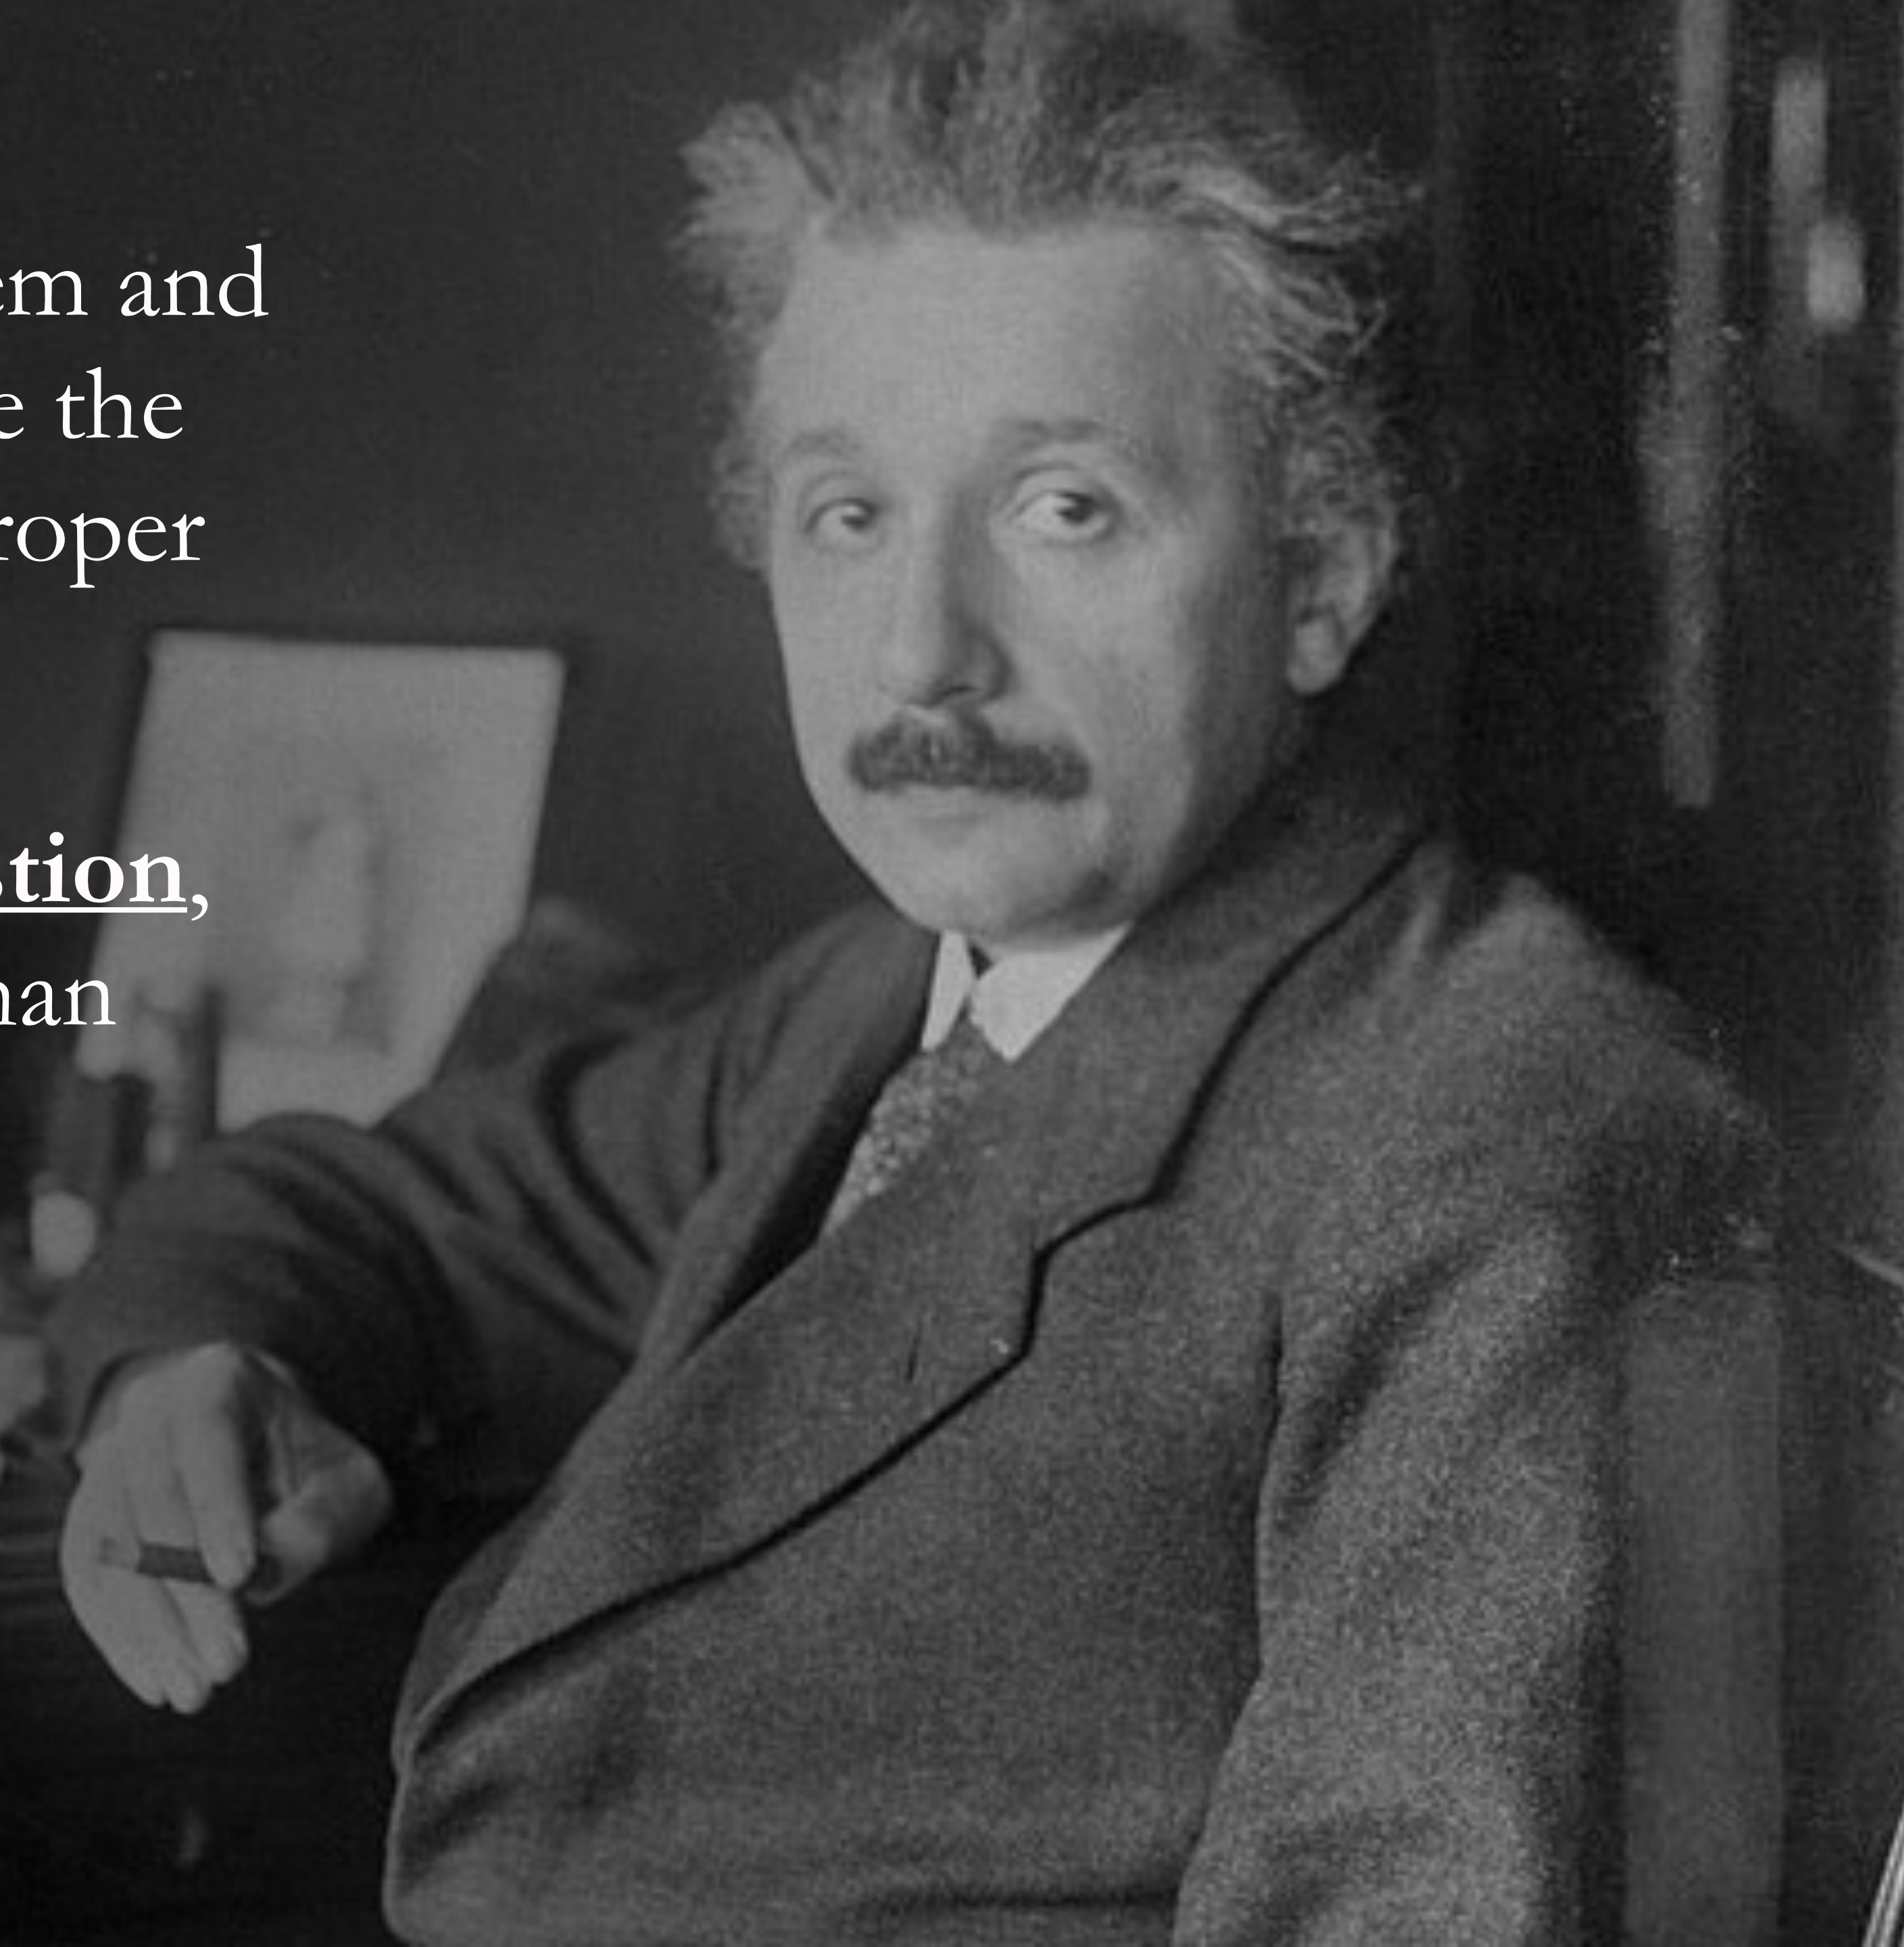

“A Problem Well-Put
is a Problem Half-Solved.”

John Dewey

“If I had an hour to solve a problem and my life depended on it, I would use the first 55 minutes determining the proper question to ask.

For once I know the proper question, I could solve the problem in less than five minutes.”

Albert Einstein

**“When an Idea is Good
Nothing Can Stop It.”**

Eugene Meyer, Washington Post

Definitions

Idea

Strategy

Plans

Execution

All Innovations are Secrets

Problem Solving

Interpretation/ Secret

Strategy

Planning

Execution

The Purpose of Innovation

Introduce and Scale the Adoption of a New Human Experience
Based on a Discovered Secret

INNOVATION RECIPE

1st: Who, in What Situation?

Learn from the Extreme Users of a Situation (Mismatch)

2nd: How to Interpret it?

What is their experience and how should we frame it?

3rd: How to Shape it to Fit?

What behaviors should be changed in what sequence to deliver value?

4th: How to Scale it?

What adoption strategy is required?

MISMATCHES ARE THE SECRET

Innovations Exist to Change Behavior

Questions are: Who, Where, & to What End?

MisMatches

The Whole World is Designed

100% of Situations Matched

??

**Each Choice Either Increases
or Decreases the Mismatch
(and a Product's Effectiveness)**

Achieving Failure

Great Solutions Reflect a Deep Understanding of
What's Essential to the Right Situations

NEW INTERPRETATIONS ARE REQUIRED

Midjourney

**The single hardest part of building...is
deciding what to build.”**

Software Design Pioneer, Fred Brooks

SECRET

Idea

Strategy

Plans

Execution

ZOOM INTO THE SECRET

**Framing
the Issue**

**Insight
into
Structure**

**What to
Build**

WHAT IS THE...

PENSION PROBLEM

****Feel Your Mind Leap to Radically Different Solutions**

Political Discipline

To Fund Responsibly
To Not Overpromise

Actuarial Model Failure

Bad Assumptions
Not Insulated from Future Risk

Benefits too Generous

Population Shape is Untenable
Need more Workers/Immigration

**HOW DO WE ENSURE THAT WE DESIGN
THE RIGHT SOLUTION?**

The Secret is often in How You Frame It

What is this problem really about?

Human-Centered Design

USER

RESOURCES

Solution

Pitch

Empathy driven

Build to Learn —> Behavior

Interpretation (Steve Jobs)

Framing the Problem

- Human vs Engineering/Institutional

The elevator is slow.

New motor

New algorithm

This wait is annoying

Install mirrors

Play music

Install hand sanitizer

Elevator Demo, Chicago World's Fair

BEGINNINGS ARE SPECIAL

ANALOGIC THINKING

Differentiate:

- 1. Surface &**
- 2. Structural Dimensions of the Problem**

Leverage Diverse Experiences (*Analog)

INTERPRETATION

Idea

Strategy

Plans

Execution

HIGHLY CITED STUDY CONCLUDED:

Successful Problem Solvers Are Better Able to Determine the Deep Structure of a Problem Before They Proceed to Match a Strategy.

Reframe It!

- What is **THE** problem..really?

Problem Solving

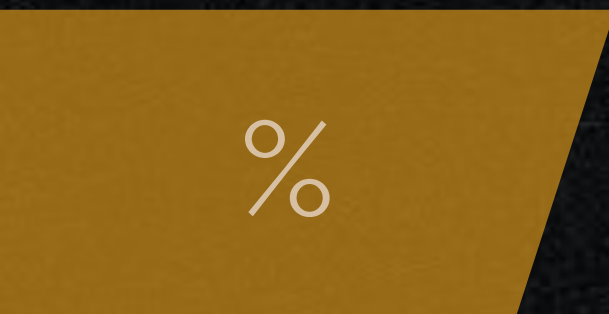

Interpretation of Deep Structure

Strategy

Planning

Execution

OUTSIDE - IN THINKING

Inside View - (Kahneman) - Bounded Creativity

Analogical Thinking - Surgery Exp

**Express & Identify: Structural Commonalities
and How They Inform the Problem**

Common Mistake

Picking Only 1 Analog & In the Same Industry

RESEARCH MOLECULAR BIO LABS

- 1 year, 4 Labs (Large, Small, All men, All women)
- Exp: E.Coli - Proteins Stuck in Filter
 - Lab 1 - All E.Coli experts (months)
 - Lab 2 - Chem, Bio, MD, Genetics (minutes)
- Lab Meetings Were Key to Unpacking the Difficult Parts of Work
- More Analogies = More Breakthroughs (variety of domains)
- The Harder the Problem, The More Distant the Analogy Required (why?)

Even “Narrow” Diversity Transformed Teams

EXAMPLE

BOSTON CONSULTING GROUP

- Created Intranet to Facilitate Analogical Thinking
- Increase access to “reference classes”
- Exp: “Post-Merger Integration”
 - Will.i.am the Conqueror - (England with Norman Kingdom)
 - Sherlock Holmes - (small details)
 - Prussian Strategist - (momentum in victory)

ANALOGIC

SIMULATIONS

Health Care

Cryptography

AI Hospital

A state-of-the-art hospital uses neural networks to predict patient needs, manage & optimize resource allocation, and even assist in diagnoses.

However, there's an issue: the neural network can only be trained in real-time and loses its training if powered down. The city faces frequent power outages. How can the hospital ensure continuous learning and functioning of its neural network without interruption?

Analogic Prompts:

- How should we define this problem? (Who, In What Situation?)
- What are the structural elements that define the Situation?
- What is this like? How might we think about this?
- Who else does this well? How would our stakeholders view this problem?
- Where else does this kind of phenomena occur?
 - What makes that similar to this?

GUIDE:

- **8MIN | SOLO + NETWORK TO FIND NEW ANALOGS (3 TEAMMATES)**
- **8MIN | SOLVE IT - WHAT IF...**
- **8MIN \\ SHARE OUT + INSPIRATION**

Quantum Battlefield

In a future battlefield, all communication is encrypted using quantum cryptography, making eavesdropping virtually impossible.

However, the quantum encryption devices are bulky and can only encrypt messages at specific locations. Soldiers need to communicate securely while on the move. How can they ensure secure communication without always accessing the quantum devices?

Analogic Prompts:

- How should we define this problem? (Who, In What Situation?)
- What are the structural elements that define the Situation?
- What is this like? How might we think about this?
- Who else does this well? How would our stakeholders view this problem?
- Where else does this kind of phenomena occur?
 - What makes that similar to this?

GUIDE:

- **8MIN | SOLO + NETWORK TO FIND NEW ANALOGS (3 TEAMMATES)**
- **8MIN | SOLVE IT - WHAT IF...**
- **8MIN \\ SHARE OUT + INSPIRATION**

Take-Aways

Innovations Are Secrets About MisMatches

Effective Problem Solving Depends on Your Interpretation of the Problem (the right question)

Discover the Deep Structure of Problems: Framing, Analogs

Analogies Reveal Structural Dimensions

Thank You

WILL GOSSIN
